- Natural Gas

PROVIDING COMPLETE PROJECT SOLUTIONS

ABOUT US

Diversified is a leading provider of underground infrastructure solutions throughout Australia. We provide basic trenching and directional drilling services through to complete project solutions for communications, electrical, water and gas. We pride ourselves on delivering successful outcomes for our diverse client list and can quickly tailor a solution to meet your requirements. Talk to us today and let us demonstrate our knowledge and what we can do to meet your needs.

Our range of services for the installation of underground infrastructure includes:

- Underground plant location (including GPR)
- Excavation and trenching
- Horizontal directional drilling
- Conduit and cable laying
- Mains laying and service installation
- Customer property connections
- Manhole construction
- Cable pit installations
- Optic fibre cable hauling
- Copper cable hauling
- LV and HV cable installations
- Traffic management
- Concrete, asphalt and brick paving remediation

COMPANY HISTORY

Diversified was founded in 1992 and began operations installing underground services for SECWA Gas and Telstra. Since then we have grown steadily and have expanded our service offer to meet today's requirements. Company founder and Managing Director, David Proctor has built a team of capable industry professionals with many years experience in the provision of underground infrastructural services. Diversified now employs a team of over 50 staff in the field.

OUR POLICIES

Standardised policies and procedures are at the forefront of our operational planning. At Diversified, no job is started without a full assessment of the job's environmental, quality and HSE requirements. Before we commence work, we walk through the job to assess these requirements. Our in-house policies comply with Environment ISO 14001, Quality AS/NZ 9001 and HSE AS/NZ 4801.

OUR CAPABILITIES

Like our name says, Diversified offers a wide and diverse range of services. These include traditional open cut excavation and trenching through to trenchless installations by HDD horizontal directional drilling. We also provide complete project management and administration of large multi-service infrastructure projects, giving our clients a complete package of services. We are one of the few companies in this sector that has its own underground plant location, traffic management and complete remediation services.

ON TIME AND
ON BUDGET"

OUR EQUIPMENT

Diversified operates a fleet of modern equipment and support vehicles ensuring our client's projects are delivered without delay and on budget.

Our fleet of equipment includes:

- 4 x Ditchwitch FX30 Vacuum Excavation Units
- 1 x Ditchwitch RT 115 Trencher
- 1 x Ditchwitch RT 115 Rock Saw
- 1 x Ditchwitch RT 45 Trencher
- 2 x Takeuchi Track Loaders
- 14 x Takeuchi Excavators – 1.8 Ton
- 4 x Takeuchi Excavators – 3.5 Ton
- 2 x Takeuchi Excavators – 5.0 Ton
- 3 x Traffic Management Field Units
- 2 x Service Location Field Units (including GPR)
- Multiple late model light, medium and heavy duty trucks and support vehicles including cranes, hiabs and tippers.

COMPLETED AND ONGOING PROJECTS

Amcom – 1992 – Ongoing

Diversified has been working closely with Amcom as their sole civil contractor for Western Australia for over ten years providing a complete range of services including;

- Design and construction of new fibre optic network throughout metropolitan Perth
- Daily connection of new customers
- Maintenance and call out services for faults and repairs
- Complete administration services in dealing with local government and other authorities.

Department of Defence - 2011

- Construction of a 25 kilometre communications network around the Army Training Facility at Bindoon, Western Australia.

Challenges included;

- Environmental – working in native bush with protected flora and fauna
- OH&S – working on a live firing range with complex site requirements
- Majority of work in rock ground conditions.

Main Roads

Western Australia - 2011

Kwinana Freeway Widening Project –

This project required the realignment of an existing fibre optic cable which conflicted with the proposed new lane construction. 5,000m of new conduit was installed to allow for the relocation of approximately 30,000m of fibre optic cable. This included multiple new installations under the existing freeway structures and the Perth to Mandurah railway line.
